

Press Release FSB 2011, October 2011

DOMO® SPORTS GRASS LAUNCHES REVOLUTIONARY CONCEPTS ON FSB 2011

Domo® Sports Grass is proud to present on FSB several new high-performance artificial grass systems for football, hockey, tennis, rugby and multifunctional sporting applications. Domo® offers their customers high quality systems that last, with warranties that are ironclad. In addition to the traditional product warranty Domo® presents a "full service" scheme, **Domo® Performance System**. A scheme that offers you the advantage of a warranty on the performance of the artificial grass construction.

An artificial grass system comprises more than the grass mat itself, Domo® developed several innovative new base structures. **Domo® Aqua Recytec** is a sub base construction that drains water with exceptional speed by way of an ingenious system of pipes. This base system is completely self-sufficient: filtered drainage water is captured and is then ready to be reused. Besides Aqua Recytec, Domo® presents a cost saving solution for assembled pitches. **DomoCompac**, a structure that can be assembled on location, which means it is also the ideal solution when installing artificial grass on contaminated subsoil.

In addition to the new sub bases Domo® is introducing a totally new environmental concept to the market. **Domo® Naturafill System**, a "Pure Nature" infill system for football grass that satisfies the technical playing properties required for FIFA 1 and 2 STAR certification.

The cream of the crop of artificial grass is **Hydrograss System**. Domo® HydroGrass ushers in a new generation of artificial grass: a patented, sliding-friendly system with built-in cooling properties. Hydrograss brings solutions for the most important issues players and clubs have with artificial grass. The perfect sliding and cooling properties are achieved through the use of several new technologies, a capillary system in combination with an especially developed water-absorbing shock pad and a new sub base construction.

EXPERT IN HIGH-PERFORMANCE ARTIFICIAL GRASS SYSTEMS

For over 25 years, Domo® Sports Grass has been guaranteeing High-Performance, High-Quality Artificial Grass Systems. Domo® is globally responsible for more than 50 million m² of installed artificial grass for football, hockey, tennis, American football, rugby, golf, skiing and multifunctional sporting applications. An artificial grass system comprises more than the grass mat itself. Domo® Sports Grass advises on the entire artificial grass construction, the type of grass mat, the foundation, the installation, any sprinkling systems needed, and the maintenance up to and including the recycling options that are available once the lifespan of the artificial grass infrastructure has ended.
